Key_Logger 3.9 (install) Task

- Install Local Key logger
- <http://www.iwantsoft.com/>

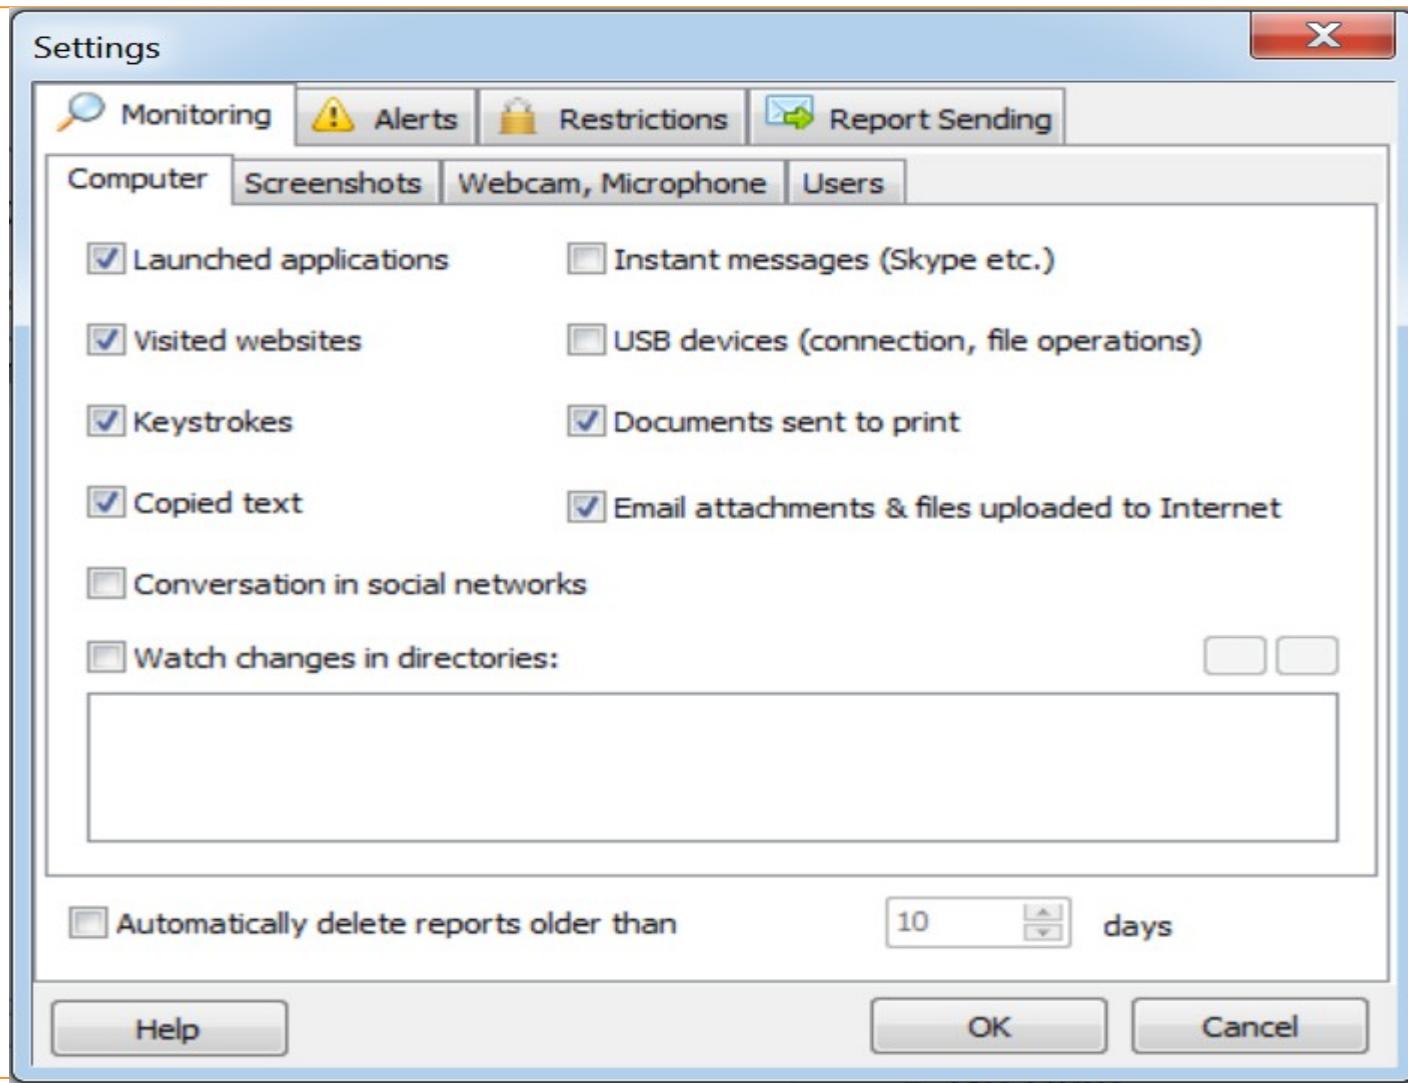

Iwantsoft Keylogger

- Iwantsoft keylogger

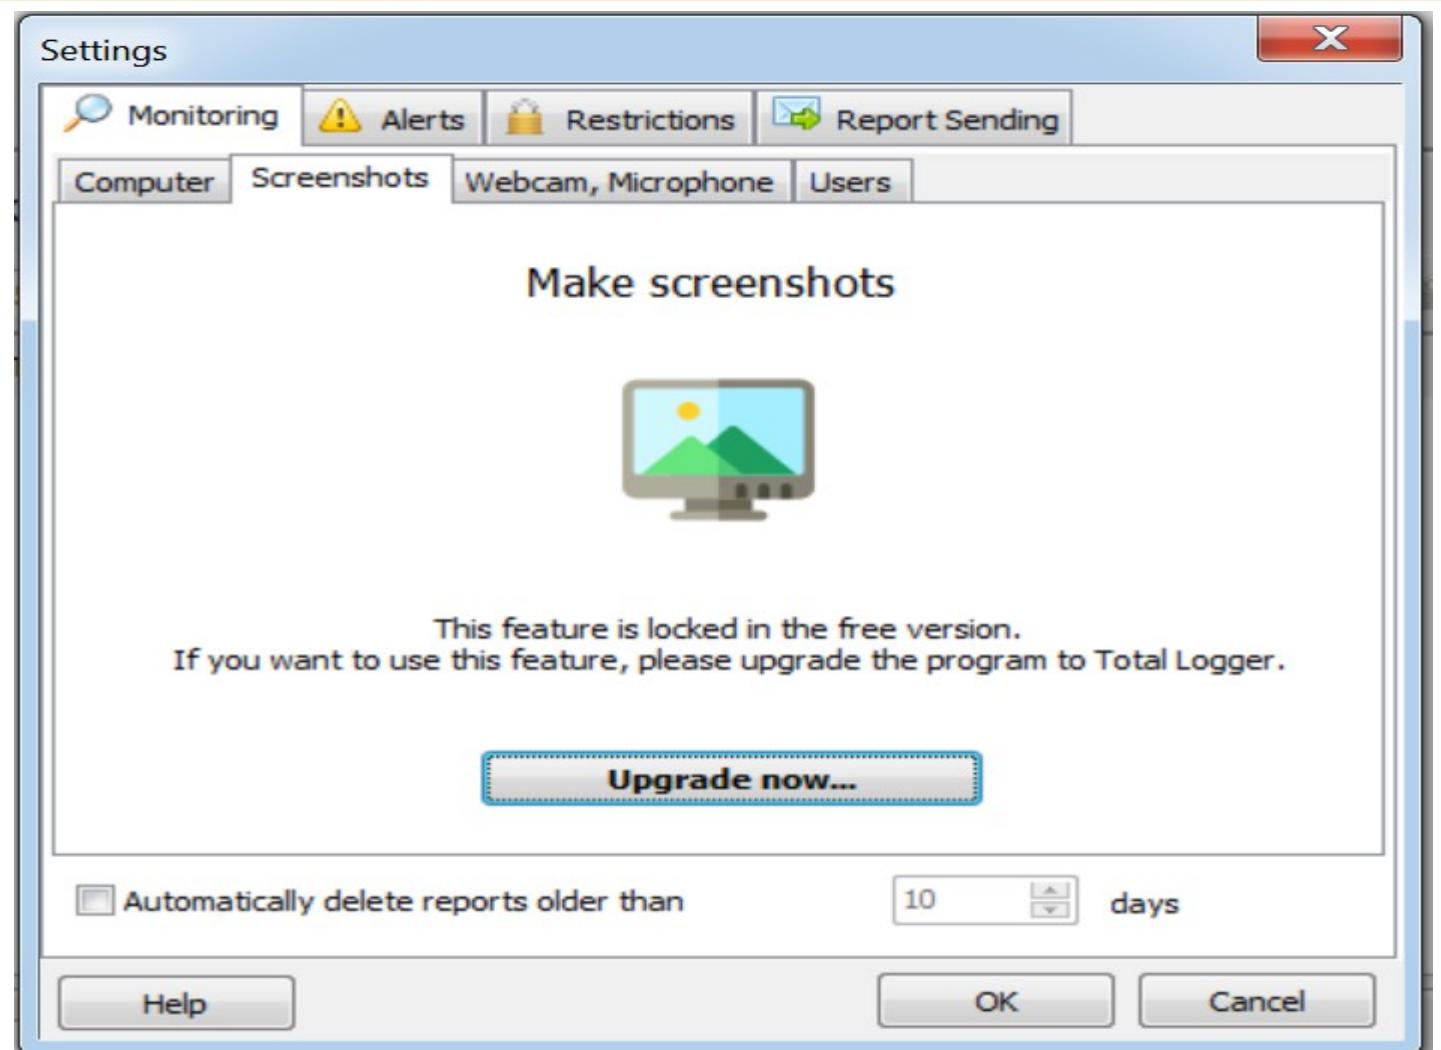

Iwantsoft Keylogger

- Keylogger Settings

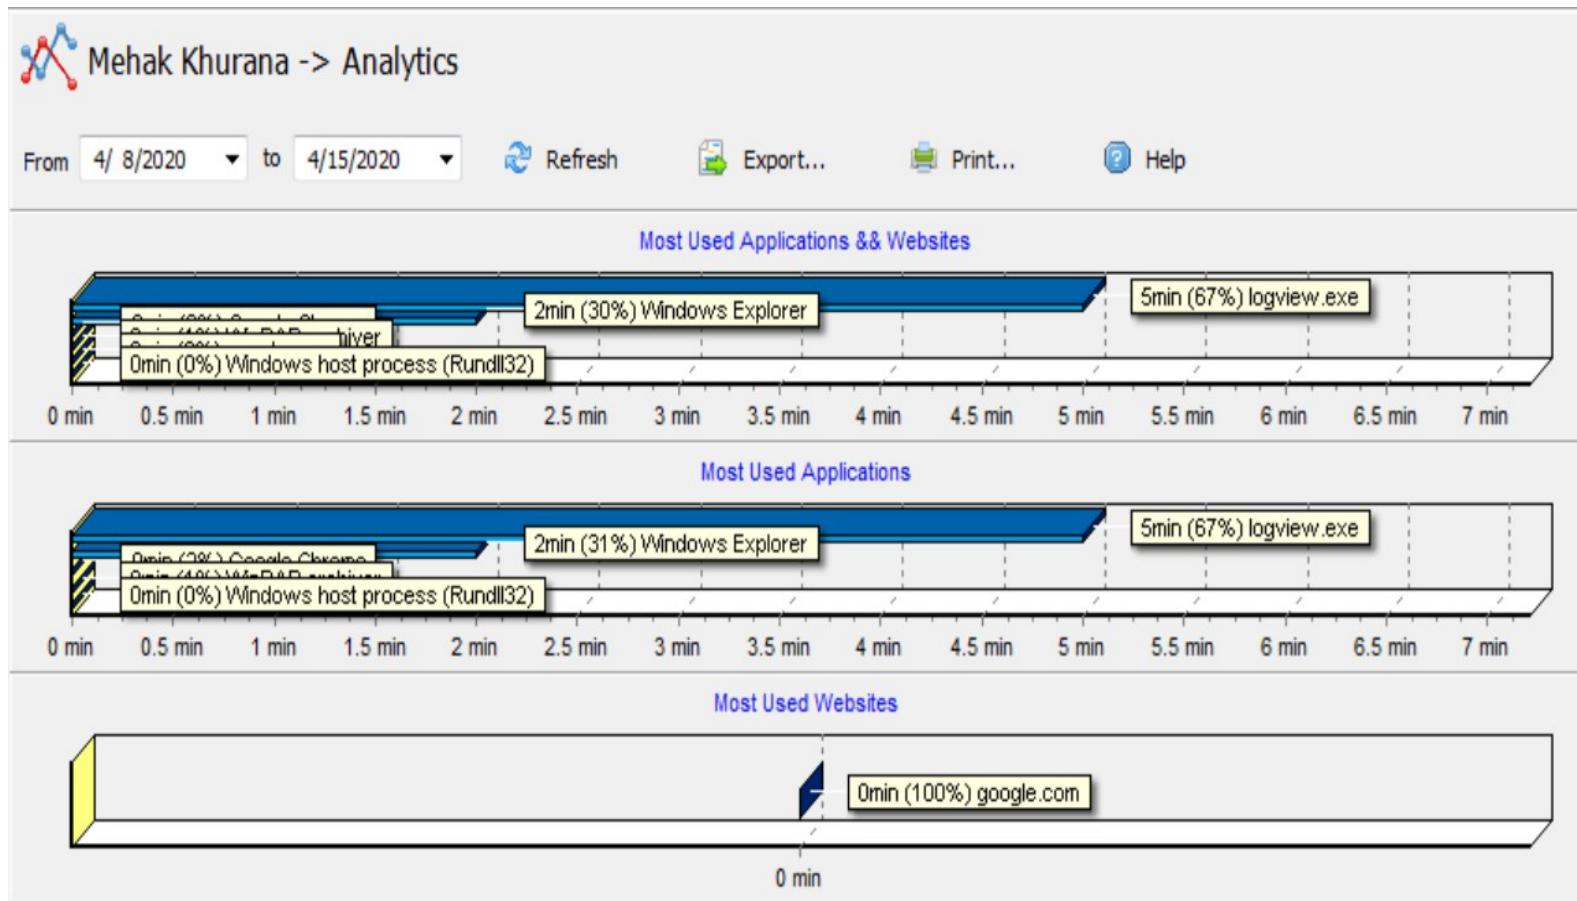

Iwantsoft Keylogger

- Screenshots
 - Webcam, microphone
- are available in paid version

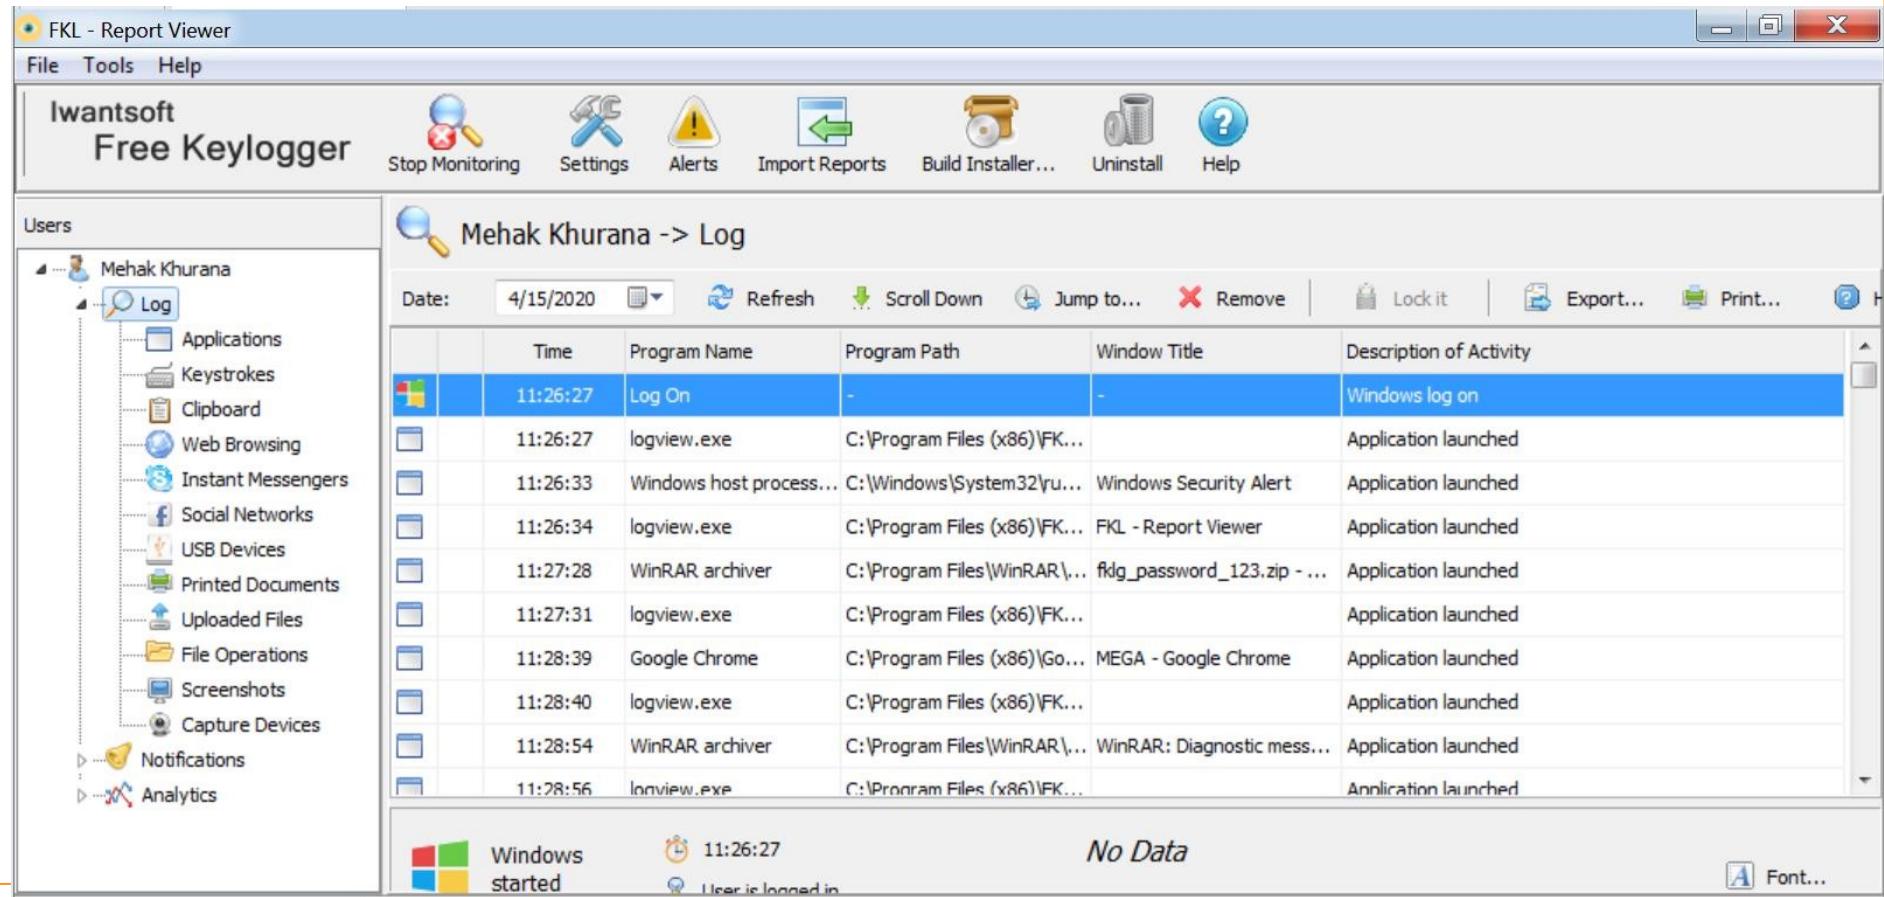

Iwantsoft Keylogger

- Can perform analysis of all activities that have been performed

Iwantsoft Keylogger

- Logs after 10 mins

The screenshot shows the Iwantsoft Free Keylogger software interface. The main window title is "FKL - Report Viewer". The menu bar includes "File", "Tools", and "Help". The toolbar contains icons for "Stop Monitoring", "Settings", "Alerts", "Import Reports", "Build Installer...", "Uninstall", and "Help". The left sidebar is titled "Users" and shows a list for "Mehak Khurana" with a "Log" entry expanded, listing categories like Applications, Keystrokes, Clipboard, Web Browsing, Instant Messengers, Social Networks, USB Devices, Printed Documents, Uploaded Files, File Operations, Screenshots, and Capture Devices. Below this is a "Notifications" section and an "Analytics" section. The main pane is titled "Mehak Khurana -> Log" and displays a table of activity logs. The columns are Date, Time, Program Name, Program Path, Window Title, and Description of Activity. The log entries are:

Date:	Time	Program Name	Program Path	Window Title	Description of Activity
4/15/2020	11:26:27	Log On	-	-	Windows log on
	11:26:27	logview.exe	C:\Program Files (x86)\FK...		Application launched
	11:26:33	Windows host process...	C:\Windows\System32\ru...	Windows Security Alert	Application launched
	11:26:34	logview.exe	C:\Program Files (x86)\FK...	FKL - Report Viewer	Application launched
	11:27:28	WinRAR archiver	C:\Program Files\WinRAR\... fklg_password_123.zip - ...		Application launched
	11:27:31	logview.exe	C:\Program Files (x86)\FK...		Application launched
	11:28:39	Google Chrome	C:\Program Files (x86)\Go...	MEGA - Google Chrome	Application launched
	11:28:40	logview.exe	C:\Program Files (x86)\FK...		Application launched
	11:28:54	WinRAR archiver	C:\Program Files\WinRAR\... WinRAR: Diagnostic mess...		Application launched
	11:28:56	lonview.exe	C:\Program Files (x86)\FK...		Annlication launched

At the bottom, there are status indicators: "Windows started" at 11:26:27 and "User is logged in". There is also a "Font..." button.

Key strokes recorded

- In log> keystrokes, Key strokes recorded

prach -> Log -> Keystrokes

Date:	4/ 2/2023	<input type="button" value=""/>	Refresh	Scroll Down	Jump to...	Remove	Lock it	Export...	Print...	Help

Hack a Remote Computer Using Ardamax Keylogger?

Ardamax Keylogger-Task

- <https://www.ardamax.com/keylogger>
- Username: ardamax
- Password: ardamax
- After install you can delete but it is still working (can check in task manager)
- It works on everything notepad, start, online accounts etc
- **Hidden mode:** attacker can hide also (right click)- ctrl + H

Requirements

1. Ardamax

- Download keylogger
- from [Here](#) : FUD (Fully UnDetectable by anti-viruses)

2. Ftp account

- You can create a free ftp account [from](#) [www.drivehq. com](http://www.drivehq.com)

3. Crypter Software

- To disable antivirus detection
- You can Download Crypter Software [from Here](#) . **password** is @hac kaholic

Ardamax Installation

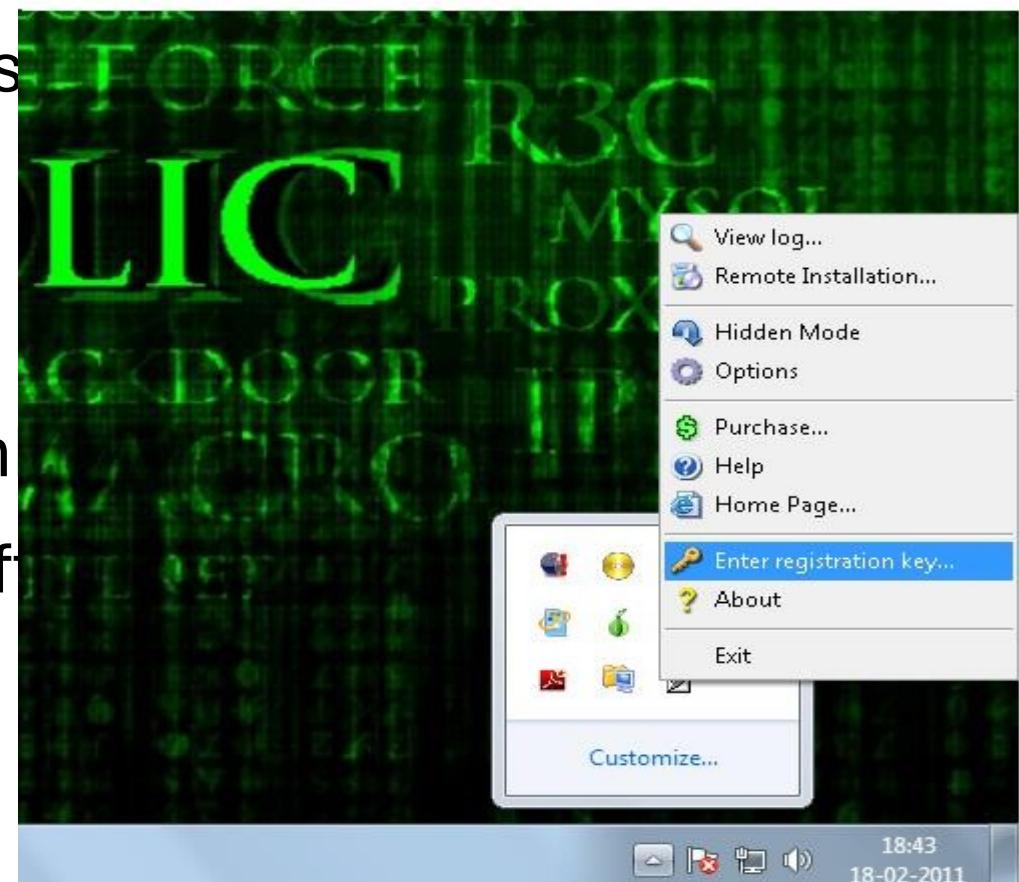

Installation and Registration

- At first run setup of Ardamax keylogger tool in our computer with a valid registration key.

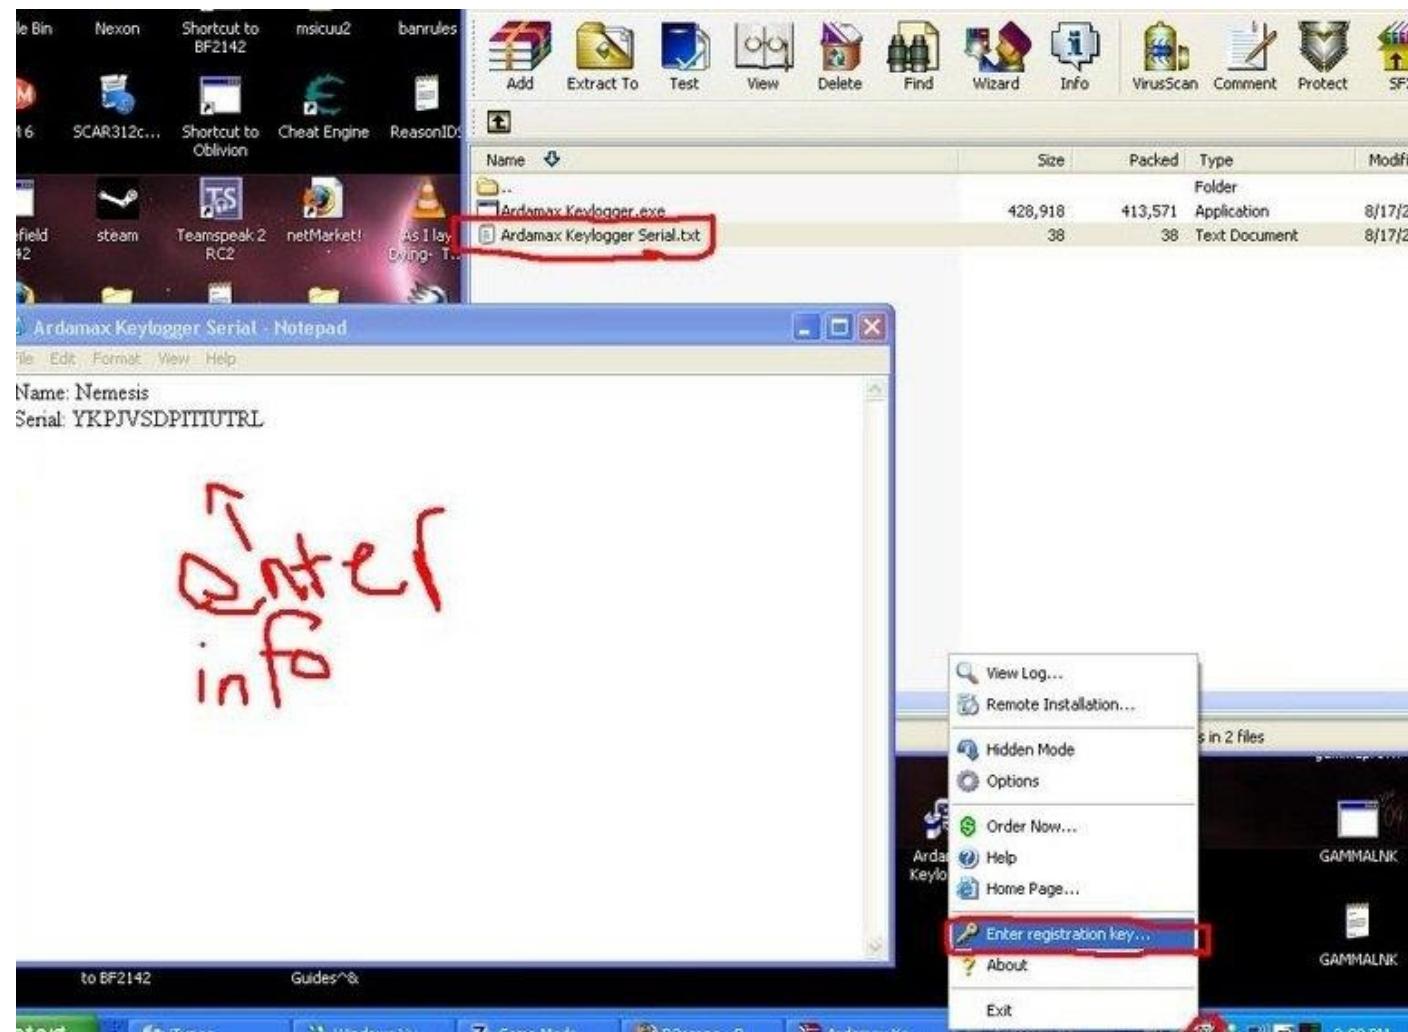

Ardamax Registration

- Step 4
- After installing **Ardamax keylogger**, see Ardamax keylogger icon
- from your tasks bar.
- Now select enter **registration key**,
- Then put in the name and the serial number which you get from the downloaded soft

Registration Process

- Enter Information

Configuration process

Step 5

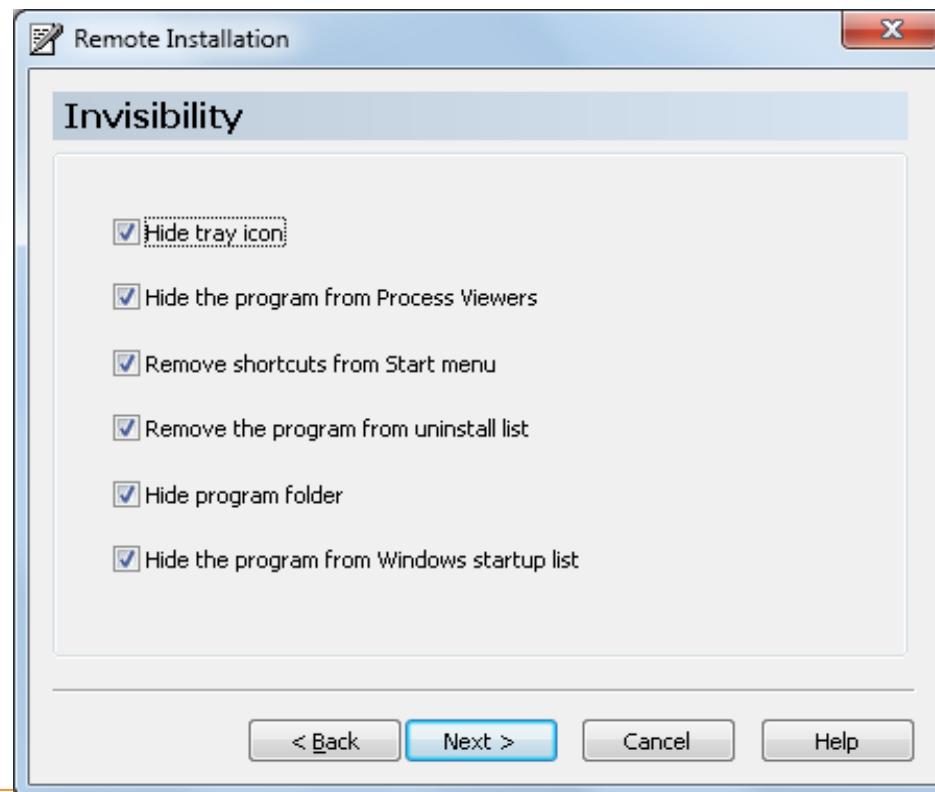

- Hit right-click on tool icon and choose this option from drop down – **remote installation**

Ardamax Steps

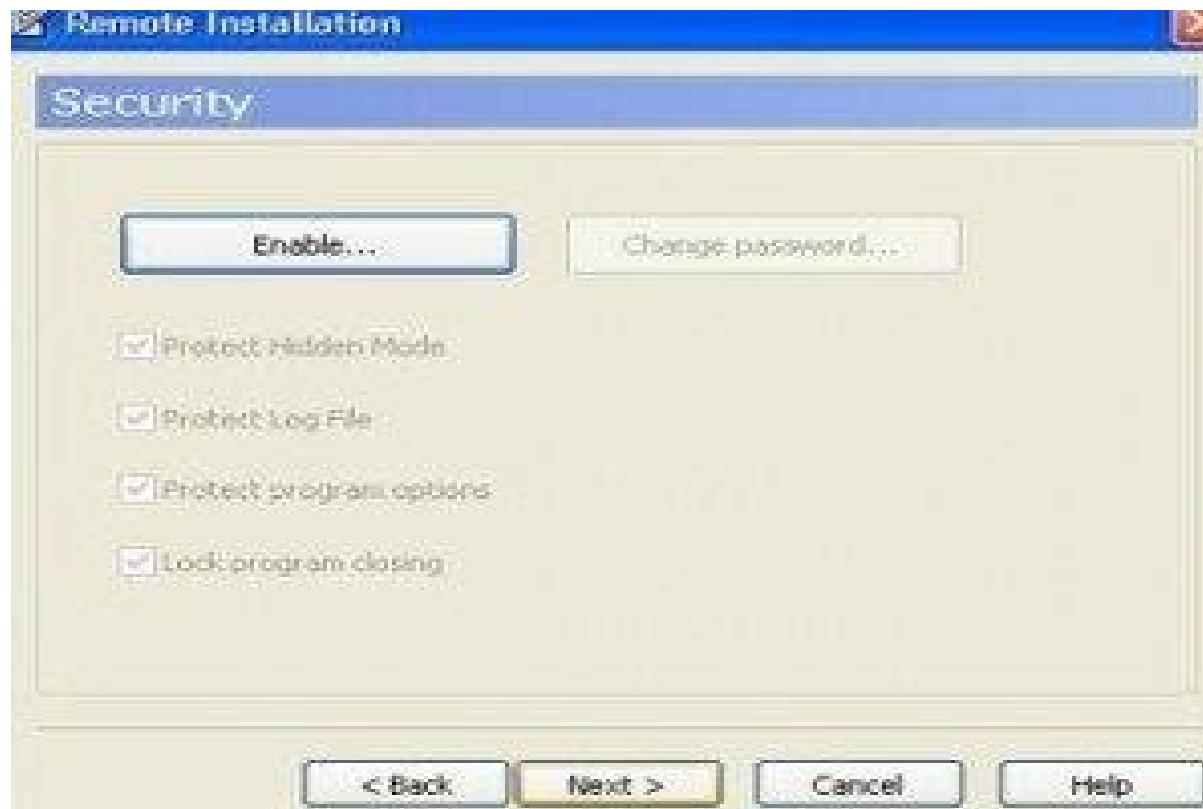

Step 5 continued

- Now we have to check all options in both appearing tabs and click **Next** button.

Step 6

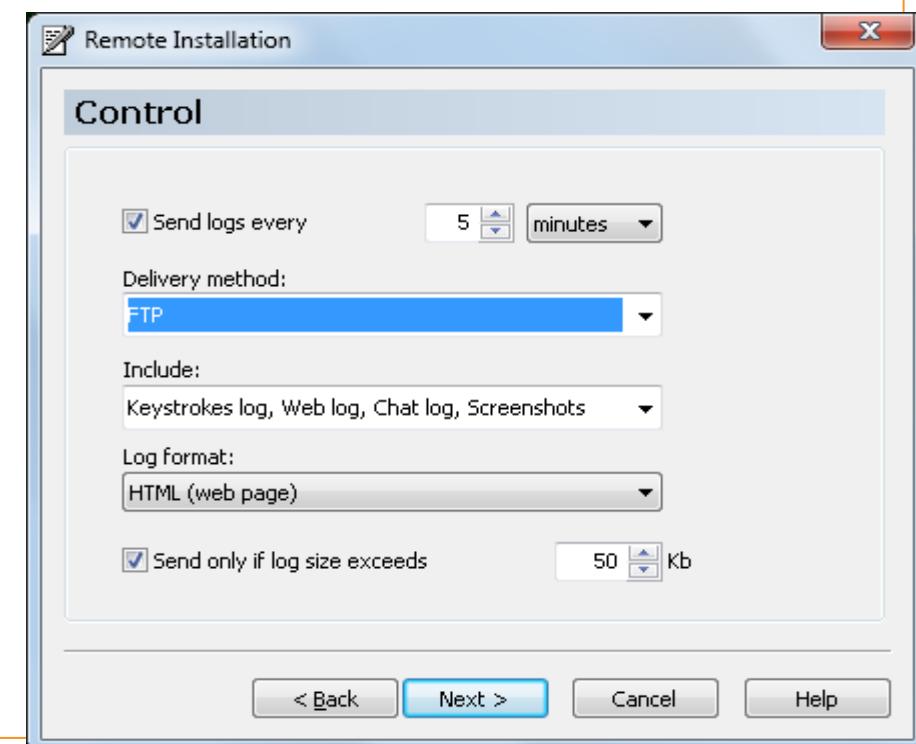

- In the security tab, choose the **enable** option and insert password. After do it hit **Next** button.

Ardamax Steps

Step 7

- Then click next three times,
- Check "**send logs every**" and set your time say 5 min
- Then select delivery method as **Ftp**, finally click next

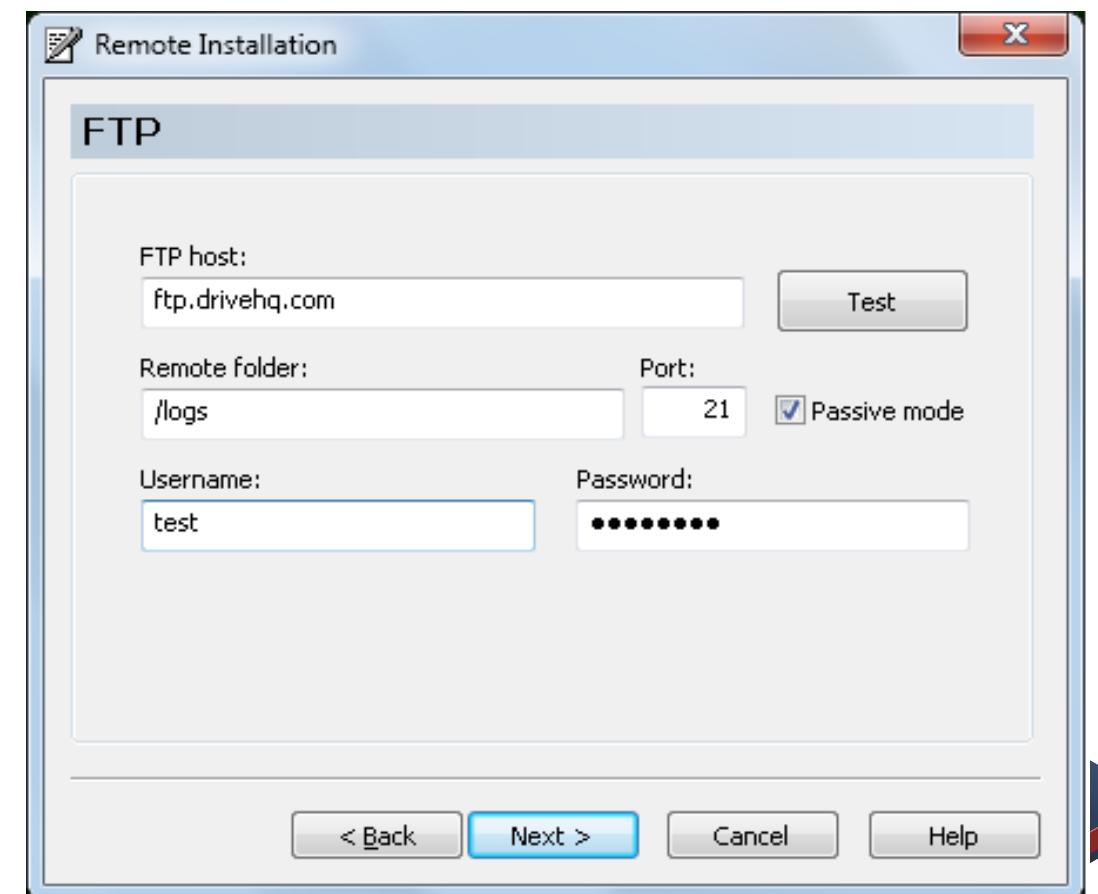

Ardamax Steps

Ardamax Steps

Step 8

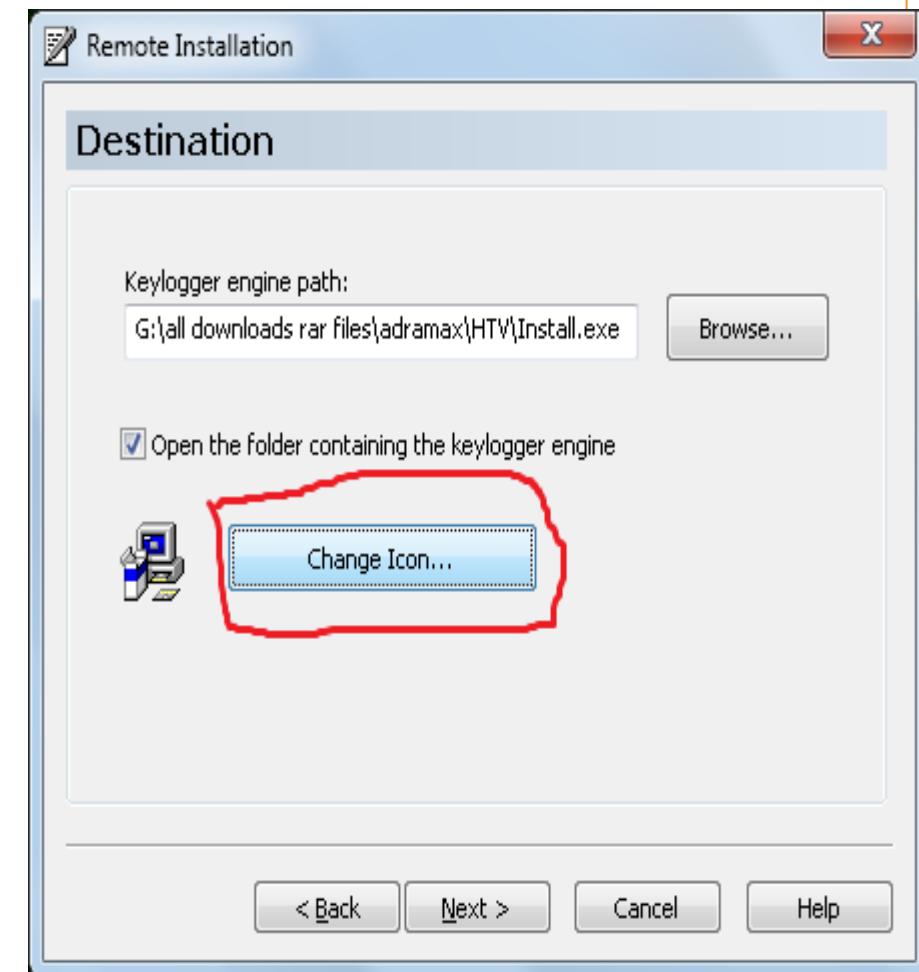

- Now enter your ftp account details which you created earlier.
- In this case enter **Ftp host -<ftp.drivehq.com>,**
- **remote folder -/logs,**
- **user - test,**
- Finally click next

Ardamax Steps

Step 9

- Change the icon by selecting **change icon**
- Finally select next and click finish

Step 10

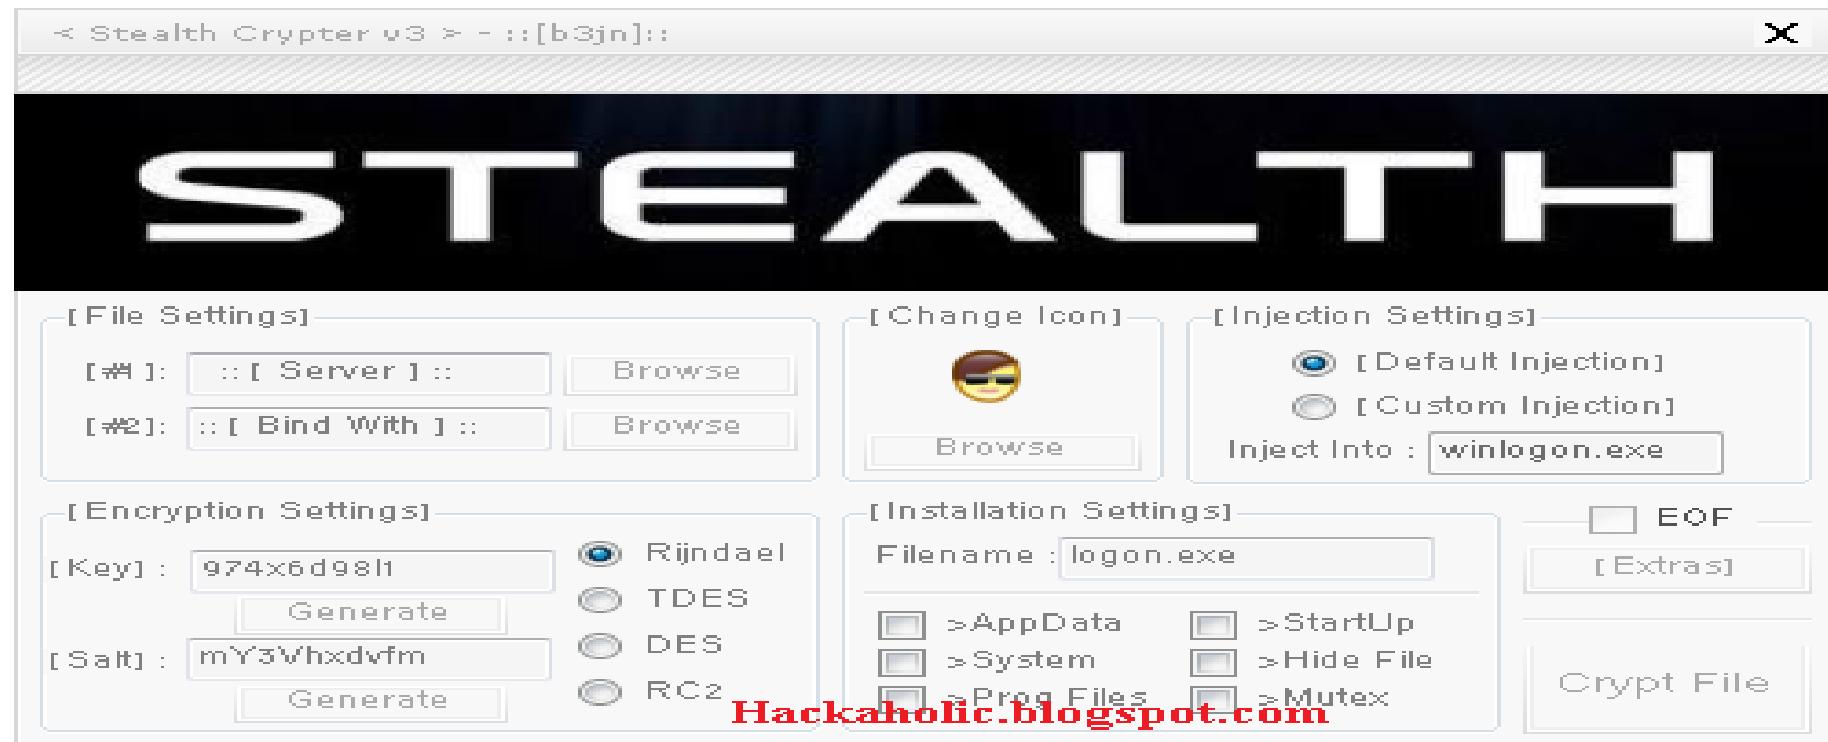

- If you've done all the steps correctly, you should get a server file (keylogger file),
- But this server file can be easily detected by anti –viruses.

To bypass anti-viruses, we need to bind and crypt the file

- To do this, open your **crypter software** (which you downloaded earlier)
- Now select file **1 as the server** file (key logger file) and
- Then select file **2 as any application**,
 - Select a good application(select a PDF file for best performance)
- finally click **Crypt file**,
- Now you will get a cryptd server file (key logger file) which is **FUD3**

We will receive keylogger file shortly that is fully undetectable by antivirus. It is installed in **Stealth mode**

Hackaholic.blogspot.com

Ardamax Steps

Note:- After crypting if this Keylogger is still detected by your anti-viruses,
Then please use Rinlogger (Free Keylogger) which is 100% FUD from [Here](#)

This is a simple but a very effective method of hacking a remote computer.

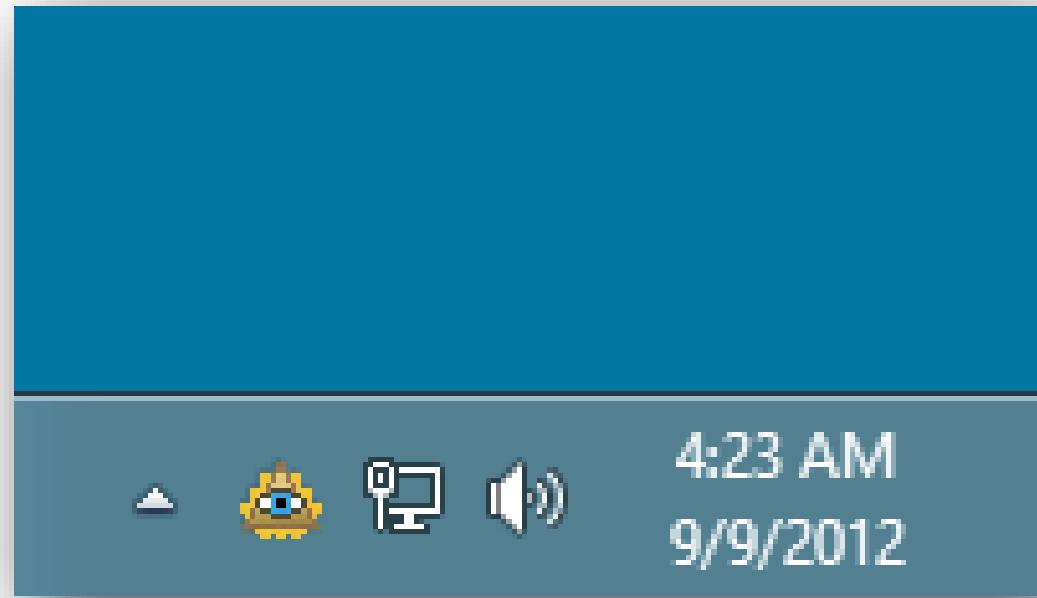

Ardamax Steps

- Step 11
- Now send the fully undetectable **Server file**(keylogger file) to your victim **via email**
- **or can** upload it to any site and ask the victim to download the file.
- You can also give the keylogger file to the victim in pendrive (changing name of the _____ file)
- Once the victim **clicks** the application, Ardamax keylogger will automatically installed and
- **Logs**(containing Facebook password email passwords ,chat logs ..etc) will be
 - send to your **ftp account**.

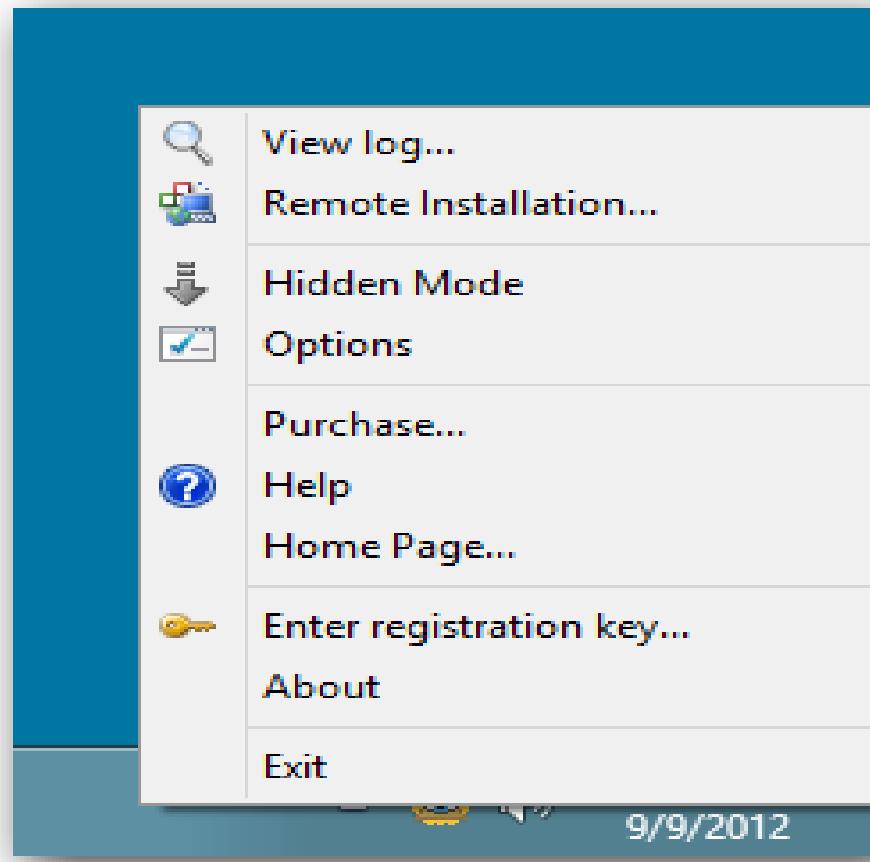

Ardamax Icon on screen

- Right after installation and execution of *Ardamax Keylogger*,
- It starts monitoring your computer. It adds an icon to the *System Tray*.

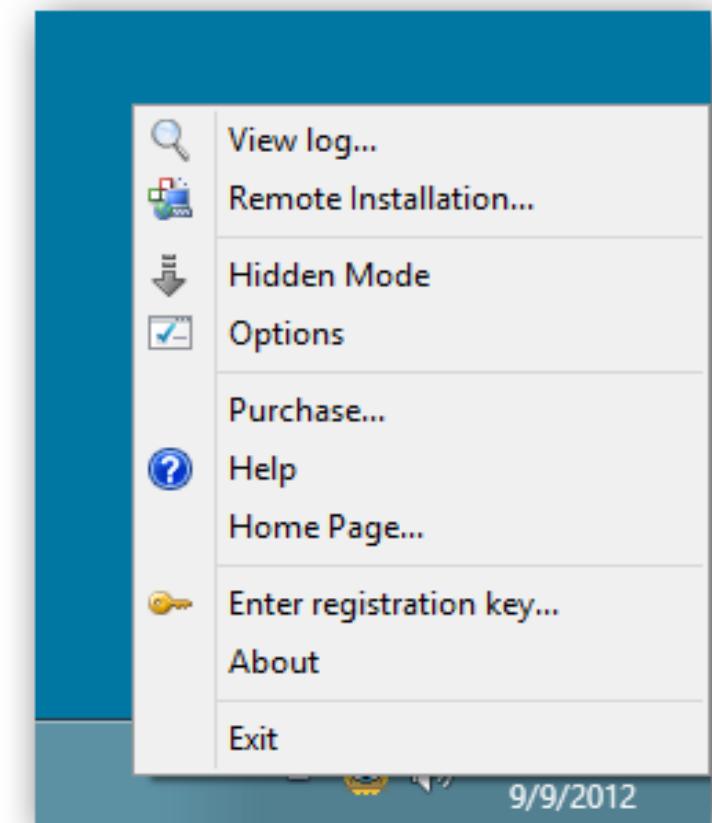

Menu

- Right-click the icon to access the options. You will see the menu.

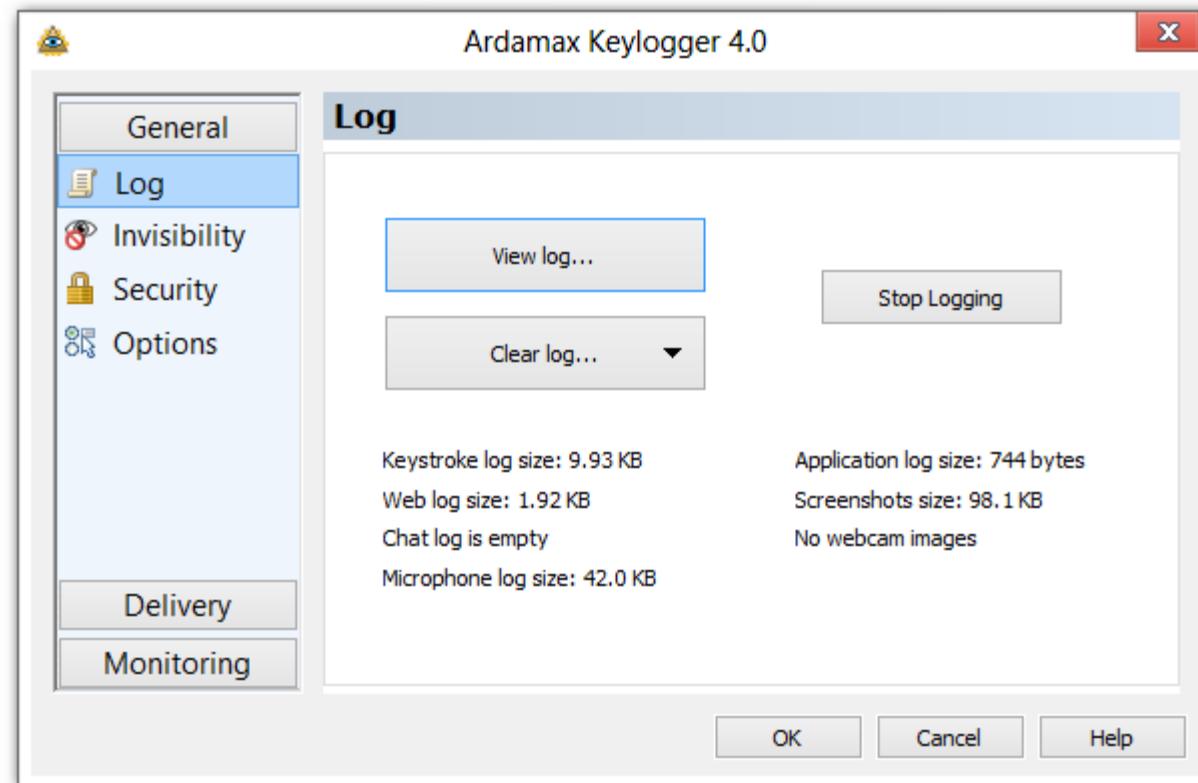

Hidden Mode (Imp)

- *Ardamax Keylogger* can run in the hidden mode so that it is impossible to detect it.
- If you enable this mode, the program can become invisible in the *Start Menu*, in the installed software list and in the list of running processes.

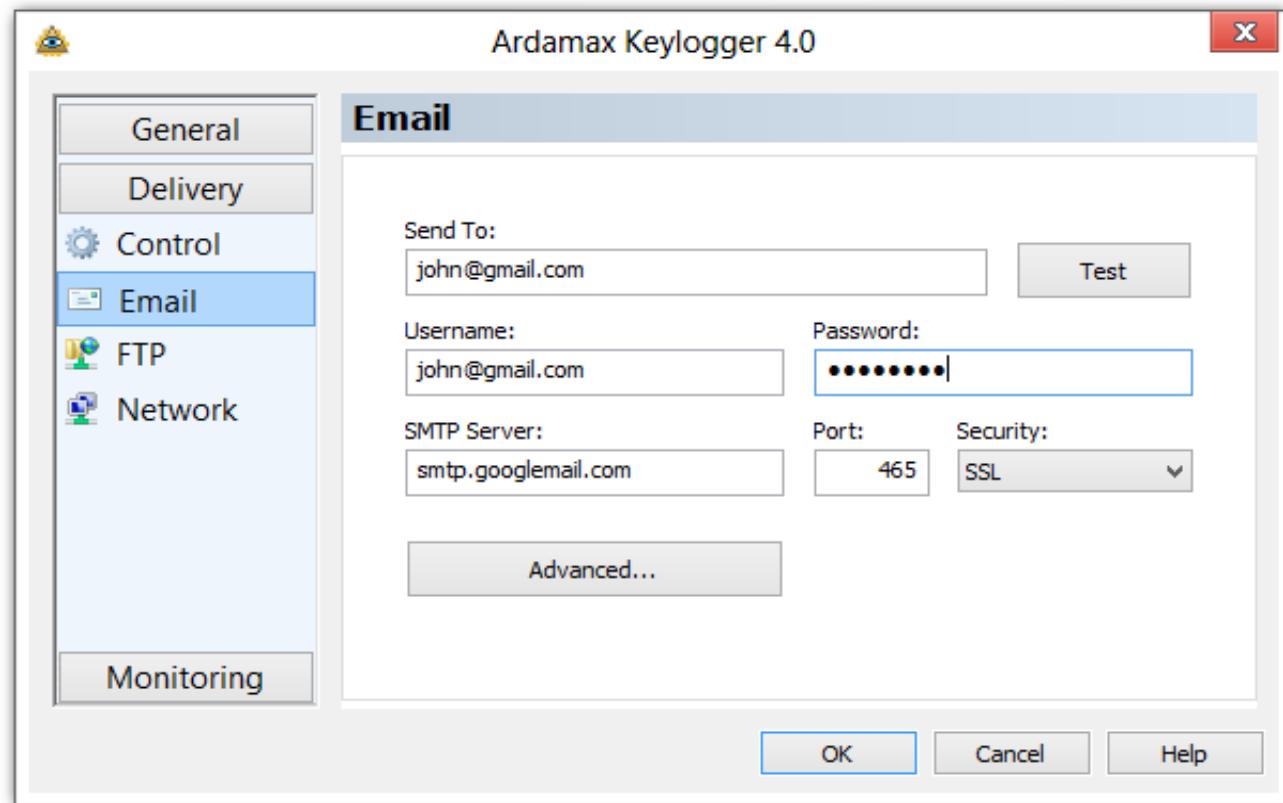

Log Page

- You can use this page to **manage log files and enable/disable monitoring of computer.**
- Here you can also see information about the **sizes of saved logs** of each type.

Email Page

- You can use this page to specify the email settings that will be used to send logs.

Student **jailed** for using keylogger to increase exam marks

A university student who plugged keyloggers into his school's computers to snatch staff passwords, access the exam application and jack up five test scores has been jailed.

The Telegraph reports that bioscience student Imran Uddin, 25, was sentenced to 4 months of jail time after using a keylogger to steal staff passwords at the University of Birmingham in the UK.

Uddin, who was reportedly on track to achieve at least a [lower second-class degree](#) – or 2:2 – increased his marks on five exams, including one from 57% to 73%.

According to The Telegraph, Uddin was jailed at Birmingham Crown Court after admitting six charges contrary to the Computer Misuse Act.
